

General Project 22—Monster RC Truck Axle/Michael Gegere

Mike's work on gatling guns is featured on the GUNSMITHING section of this page, but he also sent along these two photos of the truck axle and differential he built for his radio controlled monster truck. No plans or explanations were sent, but the project came out so nice we just thought you might like to see what it looks like. It's another good example of why people buy small precision machine tools.

The plastic ruler is just over 12" long.
