

General Project 24—Watch Case and Crown/Marc-André Lemieux

Marc-André Lemieux had the following to say in an email that included photos of his work:

“I got a Sherline lathe and a Sherline mill a few months ago. I enjoy very much experimenting with them, and here is a watch case (including the crown) and a dial that I made using both tools. The mechanical movement was embellished with the help of the mill. The hands are done by hand and blued by heating. It's great fun!”
