

## Gun Project 6—1/2-Size Model of a Rare 1910 10-Gauge Lefever Shotgun/ Roger Ronnie

Roger's second miniature gun project was also done using Sherline tools with the exception of the barrel which was a little too long. The model represents a very rare presentation gun that Roger photographed years ago and was made completely from reference to the photos. The shotgun is now complete and Roger is in the process of engraving it. Keep in mind the original gun was engraved in the finest detail by the best engraver Lefever could find at the time, and Roger is reproducing the patterns at 1/2 size. This will be quite a gun when completed!

The first two photos show the completed gun assembled but before engraving and bluing. A detail shows the ejector mechanism and the last photo shows the various machined parts laid out for display before assembly. A US Quarter near the center of the photo shows how small some of the parts are. When the gun is completely engraved and blued we will show final photos of the completed project.
